## **DETAILED ACTION**

It would be of great assistance to the Office if all incoming papers pertaining to a filed application carried the following items:

- 1. Application number (checked for accuracy, including series code and serial no.).
- 2. Group art unit number (copied from most recent Office communication).
- 3. Filing date.
- 4. Name of the examiner who prepared the most recent Office action.
- 5. Title of invention.
- Confirmation number (See MPEP § 503).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.Ç. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2 are rejected under 35 U.S.C. 103(a) as being obvious over Ho et al (5,712,877) in view of Nguyen et al (6,411,661).

The applied reference has a common Assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR

Art Unit: 2631

1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(I)(1) and § 706.02(I)(2).

Ho discloses a transmission system (fig.1) for transmitting and receiving a continuous phase modulated signal comprising: a transmitter having a precoder (22) for precoding the sequences of data streams (bk)) a modulator (12) for modulating the precoded data: transmitter (see output from the multiplied signal by the g (t) for transmitting the modulated data to the receiver); a receiver for receiving the continuous phase modulated signal; a sampler; a demodulator and a filter for filtering the received signal. Ho differs from the claimed invention in that he does not disclose a filter for filtering the continuous phase modulated signal in to a sequence of filtered signals having an absolute phase for indicating the sequence of the data symbols. However, Nguyen discloses a GMSK receiver comprising a receiver for receiving continuous phase modulated signal and a filter for filtering the continuous phase modulated signal in to a sequence of filtered signals having an absolute phase for indicating the sequence of the data symbols. (See figs.1 and 2, col.5, line 21- to col.6, line 41. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was

Art Unit: 2631

made to replace the filter of Ho with the filter of Nguyen so the system can be more efficient in filtering the received signal.

## Allowable Subject Matter

Claims 5-20 are allowed.

Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Response to Arguments

Applicant's arguments with respect to claims 1 and 2 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tesfaldet Bocure whose telephone number is 703-305-4735. The examiner can normally be reached on Monday-Friday from 8 to 5. The examiner can also be reached on alternate \*\*\*

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mohammed Ghayour, can be reached on 703-306-3034. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

Art Unit: 2631

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
